

Apache httpd

Apache httpd Web

[1]

Apache httpd

```
[root@www ~]# dnf -y install httpd
# rename or remove welcome page
[root@www ~]# mv /etc/httpd/conf.d/welcome.conf /etc/httpd/conf.d/welcome.conf.org
```

[2]

httpd

```
[root@www ~]# vi /etc/httpd/conf/httpd.conf
# line 91 : change to admin's email address
ServerAdmin root@srv.world
# line 100 : change to your server's name
ServerName www.srv.world: 80
# line 149 : change (remove [Indexes])
Options FollowSymLinks
# line 156 : change
AllowOverride All
# line 169 : add file name that it can access only with directory's name
DirectoryIndex index.html index.php index.cgi
# add follows to the end
# server's response header
ServerTokens Prod
[root@www ~]# systemctl enable --now httpd
```

[3]

HTTP HTTP 80/TCP

```
[root@www ~]# firewall-cmd --add-service=http
success
[root@www ~]# firewall-cmd --runtime-to-permanent
success
```

[4]

HTML

```
[root@www ~]# vi /var/www/html/index.html
<html>
```

```
<body>  
<div style="width: 100%; font-size: 40px; font-weight: bold; text-align: center;">  
Test Page  
</div>  
</body>  
</html>
```
